**Abstract.** The abstract should briefly summarize the contents of the  
paper in 150–250 words.

## 1 First Section

See the LNCS Springer authors' guidelines for details on formatting. In addition,  
submissions must follow further requirements that are specific to the ANTS 2020  
proceedings. These requirements are included in this ANTS2020samplepaper.tex  
template.

### 1.1 A Subsection Sample

Please note that the first paragraph of a section or subsection is not indented.  
The first paragraph that follows a table, figure, equation etc. does not need an  
indent, either.

Subsequent paragraphs, however, are indented.

**Sample Heading (Third Level).** Only two levels of headings should be num-  
bered. Lower level headings remain unnumbered; they are formatted as run-in  
headings.

*Sample Heading (Fourth Level).* The contribution should contain no more than  
four levels of headings. Table 1 gives a summary of all heading levels.

For citations of references, in-text citations must use square brackets and  
consecutive numbers associated with the ordered reference list at the end of the  
paper.

When including your references using a bib file via BibTeX, please refer to  
the sample bib provided. A references list at the end of the paper will be auto-  
matically formatted and sorted, from the references cited with in-text citations.  
Here is a sample of an in-text citation of a reference [2], and here is another [5].  
Here is a final sample [3, 1, 4].

**Table 1.** Table captions should be placed above the tables.

Heading level	Example	Font size and style
Title (centered)	<b>Lecture Notes</b>	14 point, bold
1st-level heading	<b>1 Introduction</b>	12 point, bold
2nd-level heading	<b>2.1 Printing Area</b>	10 point, bold
3rd-level heading	<b>Run-in Heading in Bold.</b> Text follows	10 point, bold
4th-level heading	<i>Lowest Level Heading.</i> Text follows	10 point, italic

Displayed equations are centered and set on a separate line.

$$x + y = z \tag{1}$$

Please try to avoid rasterized images for line-art diagrams and schemas. Whenever possible, use vector graphics instead (see Fig. 1). Any lettering in figures must be font size 6 pt or bigger (i.e., a minimum character height of 2 mm).

**Fig. 1.** A figure caption is always placed below the illustration. Please note that short captions are centered, while long ones are justified by the macro package automatically.

**Theorem 1.** *This is a sample theorem. The run-in heading is set in bold, while the following text appears in italics. Definitions, lemmas, propositions, and corollaries are styled the same way.*

*Proof.* Proofs, examples, and remarks have the initial word in italics, while the following text appears in normal font.

**Acknowledgements.** Acknowledgements, if applicable, should be given here as the last subsection of the paper, just before the list of references.
