Dear Nardine,

Below you will find the list of papers assigned to you for reviewing.

The deadline for submitting the reviews is:
**** 24th October ****

While I'm sure you are aware of the nature of EUMAS, I would like to give some guidance on the kind of reviews expected for this workshop. Being a forum very much focused on discussion and feedback (rather than dissemination and publication), and one in which a reasonable proportion of papers are on preliminary work, it is more important for EUMAS than some other venues that reviews are constructive and critical. As such, while of course it is important to select the best papers, it is perhaps even more important to provide advice for improvement and open questions which should be considered and addressed.

As with other reviewing, of course, papers irrelevant to EUMAS should be rejected, no paper should be rated more highly than it deserves, and while publication is not the focus, we intend that some will be published in a special issue of an international journal. Also, we have more submissions this year than at least the previous two, which is great but means we will have to be selective. However, all this makes the feedback you can give all the more valuable for the authors of papers which are ultimately rejected.

Please submit your reviews via EasyChair, and let me know of any problems. If you foresee difficulties in having the reviews ready for that date, please let me know as soon as possible.

http://www.easychair.org

Thanks as always for your efforts,

Simon Miles
EUMAS 2010 Programme Chair
